WALEED ALBARAKATI

Full-Stack Software Engineer

Riyadh, Saudi Arabia • 0597055755 • albrkati9@gmail.com • linkedin.com/in/waleed-albarakati • github.com/wlem24

PROFESSIONAL SUMMARY

Full-stack software engineer transitioning from technical support and IoT development into AI-powered application development. Hands-on experience building production-style platforms with FastAPI, React, and PostgreSQL, including Retrieval-Augmented Generation (RAG), vector search, and LLM integration. Placed 3rd in a national AI hackathon (Haqooq AI) building a legal-tech RAG platform, and built RFPilot, an AI-driven RFP management system, as a bootcamp graduation project. Strong foundation in troubleshooting, system integration, and client communication from 18+ months supporting IoT and telematics platforms in a live production environment.

CORE SKILLS

- **Languages & Backend:** Python, JavaScript, Node.js, FastAPI, REST API design, JWT authentication, SQL
- **Frontend:** React, responsive UI, component-based architecture, HTML/CSS
- **Data & AI:** PostgreSQL, pgvector, ChromaDB, RAG pipelines, semantic search, LLM integration, prompt engineering
- **DevOps & Tooling:** Docker, CI/CD fundamentals, Git/GitHub, Agile & Scrum, Google Cloud Platform (GCP), Kubernetes (GKE)
- **Systems & Support:** IoT platforms, telematics, incident management, root cause analysis, SLA management

PROFESSIONAL EXPERIENCE

Solutions Support Specialist | SaudiEx **Feb 2025 – Feb 2026**

- Resolved technical and platform-related incidents for an average of ~15 client companies weekly, as measured by consistent incident closure across varying vehicle and platform issues, by coordinating directly with platform support teams or independently diagnosing and resolving issues.
- Closed an average of ~15 support tickets daily, resolving 50% or more the same day, as measured by daily ticket closure rate, by prioritizing cases and escalating complex issues requiring customer follow-up or platform-support coordination.
- Maintained SLA compliance with a target resolution time of ~1 hour for customer issues, as measured by consistent adherence to response-time standards, by promptly diagnosing and resolving reported problems and escalating only cases requiring extended investigation.
- Supported the Dallah Hospital IoT project through to final delivery, maintaining device reliability and resolving on-site issues in coordination with the hospital's IT department, contributing to an overall ~80% reduction in fault/incident rates across the project lifecycle.

IoT Developer | SaudiEx **Aug 2024 – Feb 2025**

- Contributed to a hospital-grade infant safety and tracking system (Dallah Hospital Project) spanning approximately 2 years of development (joined mid-project), covering ~300 connected devices including tracking bracelets, by developing and testing real-time monitoring and device-integration features during the initial development phase.
- Collaborated with cross-functional teams on debugging and performance optimization for connected devices.

KEY PROJECTS

RFPilot — AI-Powered RFP Management Platform **2026**

- Built a full-stack platform automating the RFP lifecycle: document analysis, AI-driven Bid/No-Bid recommendations, semantic search, and collaborative approval workflows.
- Stack: FastAPI, React, PostgreSQL with pgvector, RAG pipeline, JWT auth, Docker, CI/CD.

Ruya Tech — AI Legal Assistant **Haqooq AI Hackathon — 3rd Place, 2026**

- Co-built a RAG-based platform helping employees and HR teams interpret Saudi Labor Law, contracts, and leave/benefit policies in plain language.
- Implemented an AI contract-negotiation assistant to improve transparency between employees and HR departments.
- Stack: Python, FastAPI, React, PostgreSQL vector database, semantic search, LLM integration.

AI Chatbot & Web Platform **2026**

- Built a full-stack AI chatbot with FastAPI + React, REST APIs secured with JWT, and database-integrated RFP data retrieval.

CV Evaluation Web App **2026**

- Built a resume-evaluation tool in HTML/CSS/JavaScript with dynamic UI and structured scoring logic.

AI-Powered Tourism Mobile Application | Junior Developer

- Contributed to developing a tourism mobile application using Flutter and Dart.
- Worked on backend development using Python, FastAPI, and Django.
- Contributed to integrating AI capabilities and AI agents into the application.

EDUCATION & TRAINING

Software Development Bootcamp (Python) | Saudi Digital Academy × WeCloudData | 7 weeks, 2026

- Covered backend/frontend/full-stack engineering, software architecture, Agile/Scrum, Git workflows, Docker, and CI/CD fundamentals.
- Awarded "Champion of the Week" for outstanding participation and team contribution.
- Node.js was covered as part of the backend curriculum alongside Python-based development.

Professional Cloud Software Development for Google Cloud | Tuwaiq Academy | 80 hours, Aug–Sep 2025

- Covered Kubernetes (GKE) deployment and troubleshooting, Cloud Networking (VPC, Load Balancing, DNS), CI/CD pipelines on GCP, and IAM access management.

Diploma, Computer Programming and Web Development | College of Communications and Information, Riyadh | Nov 2023

CERTIFICATIONS

- Professional Cloud Software Development for Google Cloud — Tuwaiq Academy (80 hours, Aug–Sep 2025)
- AI Engineering Certificate
- Cisco Ethical Hacker
- Google Cybersecurity Professional Certificate
- Google IT Support Professional Certificate
- IBM IT Support Professional Certificate
- Google Data Analytics Professional Certificate
- Meta Front-End Developer Professional Certificate
- CompTIA A+ (Preparation)
- Software Development using Python Bootcamp Certificate
